## **1. Project overview**

### **ConvoConnect: Simplifying Video Conferencing**

**Introducing our revolutionary video conference app!**

**Designed to redefine remote collaboration, our webapp offers an intuitive and innovative platform for seamless communication.**

**Experience a new level of connectivity with our group video conference feature. Whether you're working with colleagues, connecting with friends, or hosting virtual events, our webapp ensures a smooth and immersive experience that brings everyone together.**

**Break down barriers and enhance collaboration with real-time screen sharing. Whether you're delivering dynamic presentations, collaborating on projects, or providing hands-on demonstrations, our screen sharing feature allows for seamless interaction and understanding.**

**Never miss a moment with our convenient meet recording functionality. Capture important discussions, presentations, or brainstorming sessions for later playback and sharing with absent participants. Your valuable insights are preserved, ensuring nothing gets lost in translation.**

**Stay engaged and connected with in-meet chat. Instantly communicate, share links, or ask questions alongside the live audio and video streams, making collaboration efficient and effective.**

**Effortlessly plan and organize your video conferences with our meet scheduling feature. Set up meetings, invite participants, and send automated reminders, ensuring everyone is prepared and punctual for productive sessions.**

**Your privacy and security are paramount. Our app employs robust encryption to safeguard your data, ensuring all communications remain confidential and protected from unauthorized access.**

**Step into a new era of remote collaboration and communication. Discover the unmatched convenience of seamless video conferencing, innovative screen sharing, meet recording, in-meet chat, and meet scheduling features – all within our game-changing video conference app. Connect, collaborate, and achieve more together!**

## **Purpose :**

**The purpose of video conferencing apps is to allow people to communicate in real time, regardless of their location, using video and audio streaming:**

- **Connect people**

**Video conferencing apps allow people to connect with each other, even if they're in different locations.**

- **Enhance collaboration**

**Video conferencing apps can help with collaboration by allowing people to see each other's nonverbal communication, which can lead to richer context and stronger relationships.**

- **Save money**

**Video conferencing can save money on travel by allowing people to communicate without having to travel long distances.**

- **Boost team spirit**

**Video conferencing can help boost team spirit by making it easier for people to collaborate on projects and discussions.**

- **Improve accountability**

**Video conferencing can help improve accountability among employees by making it easier for colleagues to see each other.**

**Video conferencing apps can be used for a variety of purposes, including:**

- **Team meetings**
- **Webinars**
- **Product demos**
- **Job interviews**
- **Virtual lectures**
- **Catching up with friends**
- **Hosting business meetings**

**To use a video conferencing app, you'll need a device with a webcam, microphone, and speaker, as well as internet access. You'll also need to install or download the video conferencing app.**

## **Features :**

**Some features of video conferencing apps include:**

### **Screen sharing**

**A prominent feature that allows users to collaborate on a project by sharing their screens**

### **Chat**

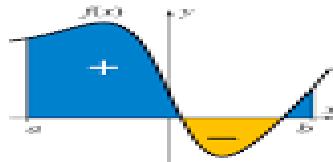

**Allows participants to exchange messages, create personal conversations, and ask questions**

## Security

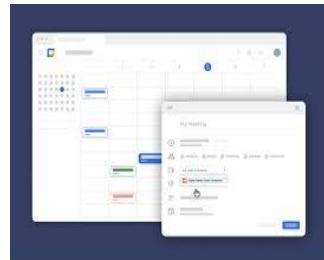

**Most cloud video conferencing solutions use end-to-end encryption to protect users' data**

## Integrations

**Allows users to connect with others around the world without being limited by time zones or geographical location**

## Scheduling

**Allows users to schedule meetings with others**

## Video and audio quality

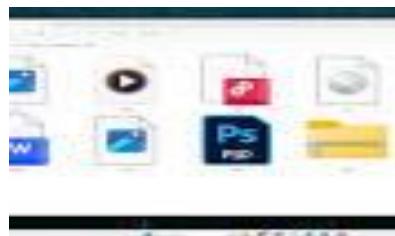

**Provides high-quality audio and video to ensure smooth interaction**

## Video call recording

**Allows users to record and transcribe meetings for future reference**

### **File sharing**

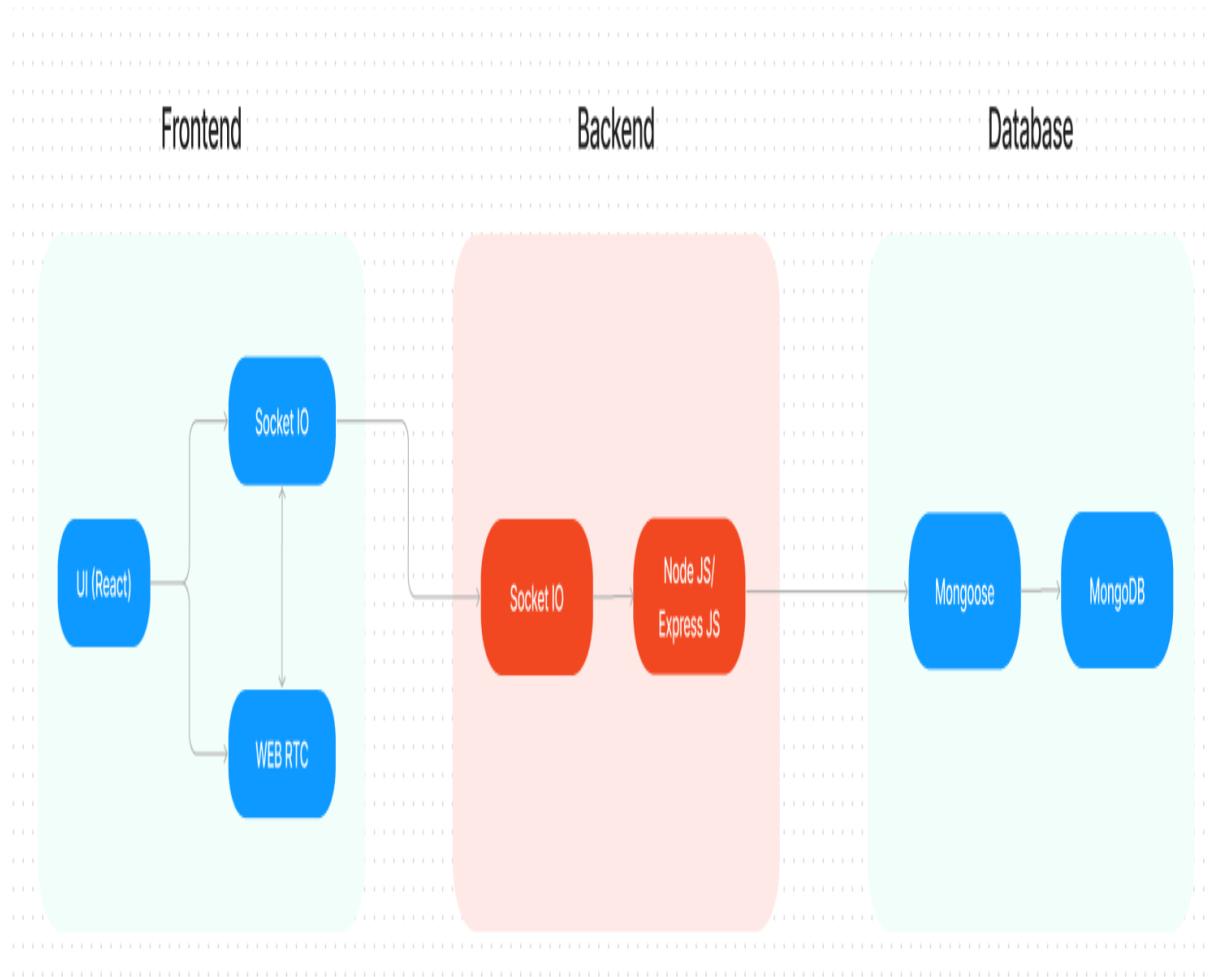

**Allows participants to share documents with others for viewing and editing**

**Other features of video conferencing apps include:**

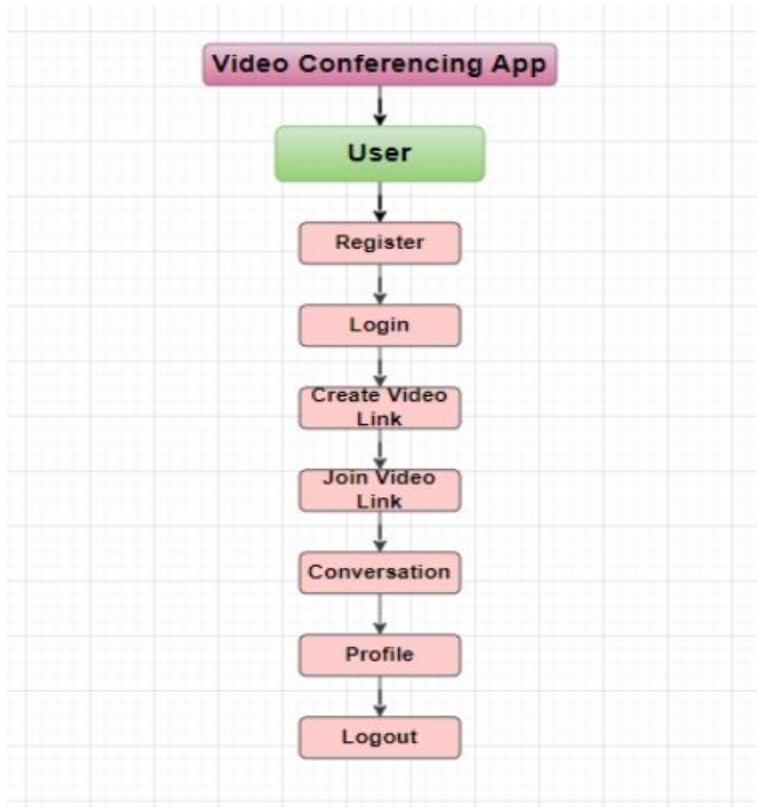

- **User management**
- **Mobile support**
- **Secure server**
- **Firewalls**
- **Authentication**
- **Data encryption**
- **Active speaker view**
- **Switching between speakers**
- **Live streaming**

## 2. Architecture

**The technical architecture of our video conference app follows a client-server model, where the frontend serves as the client and the backend acts as the server. The frontend encompasses not only the user interface and presentation but also incorporates the socket.io-client and WebRTC API.**

## **Work Flow of Proposed system:**

### **3. Setup Instructions**

#### **Prerequisites :**

**Here are the key prerequisites for developing a full-stack application using Node.js, Express.js, MongoDB, React.js, Socket.io, Agora RTC, and Agora RTM:**

- **Node.js and npm:**

**Node.js is a powerful JavaScript runtime environment that allows you to run JavaScript code on the server-side. It provides a scalable and efficient platform for building network applications.**

**Install Node.js and npm on your development machine, as they are required to run JavaScript on the server-side.**

- **Download: <https://nodejs.org/en/download/>**

- **Installation instructions:**

**<https://nodejs.org/en/download/package-manager/>**

- **Express.js:**

**Express.js is a fast and minimalist web application framework for Node.js. It simplifies the process of creating robust APIs and web applications, offering features like routing, middleware support, and modular architecture.**

**Install Express.js, a web application framework for Node.js, which handles server-side routing, middleware, and API development.**

**Installation: Open your command prompt or terminal and run the following command:**

**npm install express**

- **MongoDB:**

**MongoDB is a flexible and scalable NoSQL database that stores data in a JSON-like format. It provides high performance, horizontal scalability, and seamless integration with Node.js, making it ideal for handling large amounts of structured and unstructured data.**

**Set up a MongoDB database to store your application's data.**

- **Download:** <https://www.mongodb.com/try/download/community>
- **Installation instructions:**  
<https://docs.mongodb.com/manual/installation/>

**.React.js:**

**React.js is a popular JavaScript library for building user interfaces. It enables developers to create interactive and reusable UI components, making it easier to build dynamic and responsive web applications.**

**Install React.js, a JavaScript library for building user interfaces.**

**Follow the installation guide:** <https://reactjs.org/docs/create-a-new-react-app.html>

- **Socket.io:**

**Socket.io is a real-time bidirectional communication library that enables seamless communication between the server and clients. It allows for real-time data exchange, event-based messaging, and facilitates the development of real-time applications such as chat, collaboration, and gaming platforms.**

**Install Socket.io, a real-time bidirectional communication library for web applications.**

## Installation :

- **Open your command prompt or terminal of server and run the following command:**

**npm install socket.io**

- **Open your command prompt or terminal of client and run the following command:**

**npm install socket.io-client**

- **Agora RTC:**

**Agora RTC (Real-Time Communication):** Agora RTC provides a platform for real-time audio and video communication. It offers a range of features like video conferencing, live streaming, and interactive broadcasting, enabling developers to create immersive and interactive communication experiences.

- **Sign up for an Agora developer account to access their RTC platform.**
- **Integration guide and documentation:** <https://docs.agora.io/en/>

- **Agora RTM:**

**Agora RTM enables real-time messaging and data synchronization between users.** It provides reliable and low-latency messaging capabilities, allowing developers to build chat applications, collaborative tools, and real-time notification systems.

- **Sign up for an Agora developer account to access their RTM platform.**
- **Integration guide and documentation:**  
<https://docs.agora.io/en/Real-time-Messaging/index.html>
- **HTML, CSS, and JavaScript: Basic knowledge of HTML for creating the structure of your app, CSS for styling, and JavaScript for client-side interactivity is essential.**
- **Database Connectivity: Use a MongoDB driver or an Object-Document Mapping (ODM) library like Mongoose to connect your Node.js server with the MongoDB database and perform CRUD (Create, Read, Update, Delete) operations. To Connect the Database with Node JS go through the below provided link:**
  - <https://www.section.io/engineering-education/nodejs-mongoosejs-mongodb/>
- **Front-end Framework: Utilize Angular to build the user-facing part of the application, including products listings, booking forms, and user interfaces for the admin dashboard.**
- **Version Control: Use Git for version control, enabling collaboration and tracking changes throughout the development process. Platforms like GitHub or Bitbucket can host your repository.**
  - **Git: Download and installation instructions can be found at:**  
<https://git-scm.com/downloads>

- **Development Environment: Choose a code editor or Integrated Development Environment (IDE) that suits your preferences, such as Visual Studio Code, Sublime Text, or WebStorm.**

- **Visual Studio Code: Download from**  
<https://code.visualstudio.com/download>

- **Sublime Text: Download from**  
<https://www.sublimetext.com/download>

- **WebStorm: Download from**  
<https://www.jetbrains.com/webstorm/download>

**To run the existing Video Conference App project downloaded from Google drive:**

**Follow below steps:**

**.Download the code:**

- **Download the code from the below link:**

[https://drive.google.com/drive/folders/1c1SBTyz8HLUh6g\\_TfPdNrojvMI3KIK0g?usp=sharing](https://drive.google.com/drive/folders/1c1SBTyz8HLUh6g_TfPdNrojvMI3KIK0g?usp=sharing)

- **Install Dependencies:**

- **Navigate into the cloned repository directory:**

**cd smart-meet**

- **Install the required dependencies by running the following commands:**

**cd client**

**npm install**

**cd ..server**

**npm install**

- **Start the Development Server:**

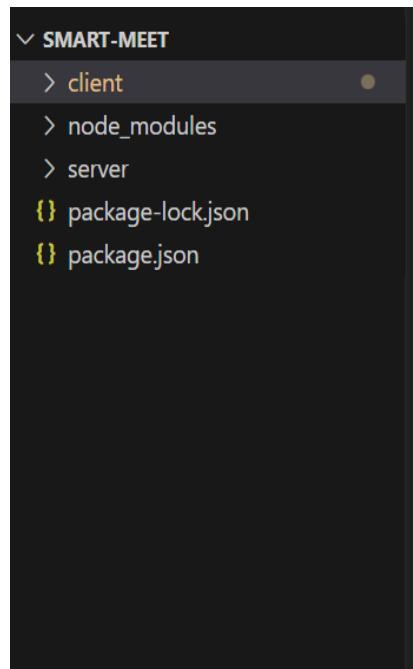

- **To start the development server, execute the following command:**

**npm start**

- **The video conference app will be accessible at <http://localhost:3000>**
- **Access the App:**
  - **Open your web browser and navigate to <http://localhost:3000>.**
  - **You should see the video conference app's homepage, indicating that the installation and setup were successful.**  
**You have successfully installed and set up the e-commerce app on your local machine. You can now proceed with further customization, development, and testing as needed.**

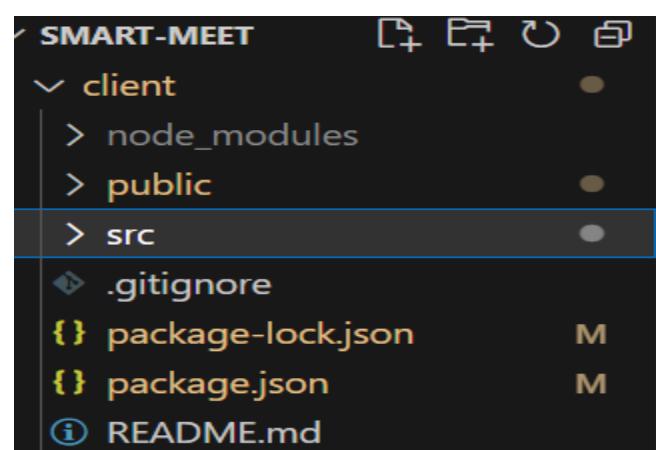

## 4.Folder Structure

- **Inside the smart-meet (video conference app) directory, we have the following folders**

### Client directory :

**The below directory structure represents the directories and files in the client folder (front end) where, react js is used along with Api's such as socket.io and agora.**

```

    < src
      > components
      > context
      > images
      > pages
      > protectedRoute
      > styles
      JS AgoraRTMSetup.js U
      JS AgoraSetup.js M
      # App.css M
      JS App.js M
      JS App.test.js
      # index.css
      JS index.js
      logo.svg
      JS reportWebVitals.js
      JS setupTests.js
      JS Socket.js

```

```

    < src
      < components
        Chat.jsx U
        Controls.jsx M
        MeetData.jsx U
        Participants.jsx U
        ProfileCard.jsx U
        VideoPlayer.jsx M
      < context
        authContext.jsx M
        SocketContext.jsx M
      > images
      < pages
        Home.jsx M
        Login.jsx M
        MeetRoom.jsx M
        Profile.jsx U
        Register.jsx M
      < protectedRoute
        LoginProtector.jsx
        RouteProtector.jsx
      > styles
      JS AgoraRTMSetup.js U

```

## Server directory :

**The below directory structure represents the directories and files in the server folder (back end) where, node js, express js and mongodb are used along with socket.io Api.**

```
server
└── controllers
    └── auth.js
└── middleware
    └── auth.js
└── models
    ├── Rooms.js
    └── User.js
└── node_modules
└── routes
    └── auth.js
└── socket
    ├── roomHandler.js
    ├── .env
    └── index.js
└── package-lock.json
└── package.json
```

## **5. Running the Application**

**provide commands to start the frontend and backend servers locally.**

**Frontend:**

**npm start in the client directory.**

**Backend:**

**npm start in the server directory.**

## **6.API Documentation**

### **Backend Development :**

#### **Setup express server**

- 1. Create index.js file in the server (backend folder).**
- 2. Create a .env file and define port number to access it globally.**
- 3. Configure the server by adding cors, body-parser.**

#### **Create socket.io connection**

- 1. Import socket.io in the index.js file.**
- 2. Create server using the socket.io.**
- 3. Start the server.**

#### **Configure MongoDB**

- 1. Import mongoose.**
- 2. Add Database URL to the .env file.**
- 3. Connect the database to the server.**
- 4. Create a ‘models’ folder in the server to store all the DB models.**

#### **Add authentication**

- 1. Create the “User” model for the MongoDB.**
- 2. Create auth controller file to control the authentication actions.**
- 3. Import “bcrypt” – used to hash(encode) the password to make it secure.**
- 4. Import “JWT” to create authentication tokens.**

**5. Define registration & login activities.**

**6. Configure frontend & backend for authentication and store authenticated data in Context API in frontend.**

#### **Create rooms**

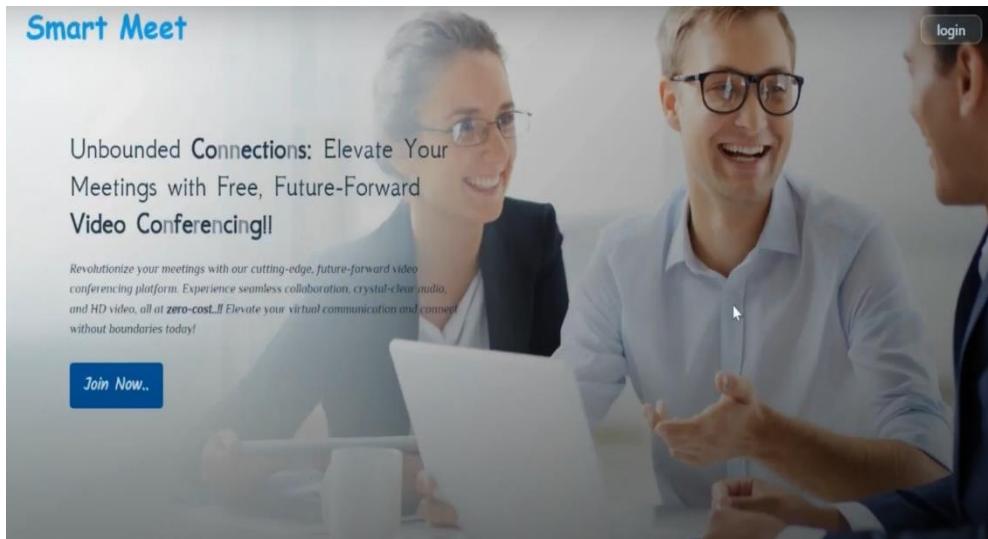

- Create “Rooms” model to store data of rooms (meet rooms) in Database.**
- Configure socket.io-client to make client-server communication simpler.**
- Send message to server if client requested to create a room.**
- Create a new room and add user to it.**
- Allow other users to join the room.**
- Manage user leaving the room.**
- Use the calendar input, if the user wants to schedule meet for later.**

## **7.Authentication**

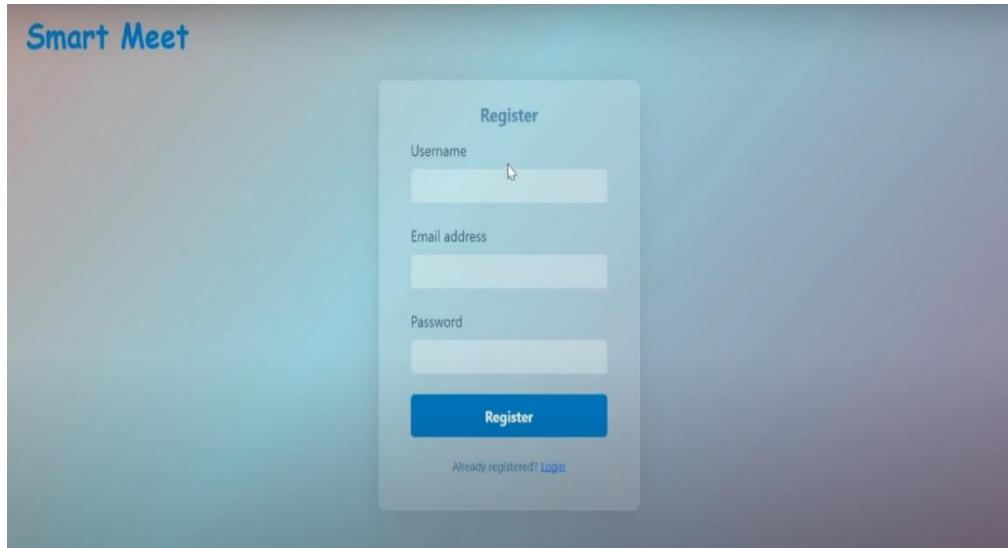

- 1. Create the “User” model for the MongoDB.**
- 2. Create auth controller file to control the authentication actions.**
- 3. Import “bcrypt” – used to hash(encode) the password to make it secure.**
- 4. Import “JWT” to create authentication tokens.**
- 5. Define registration & login activities.**
- 6. Configure frontend & backend for authentication and store authenticated data in Context API in frontend.**

## 8.User Interface

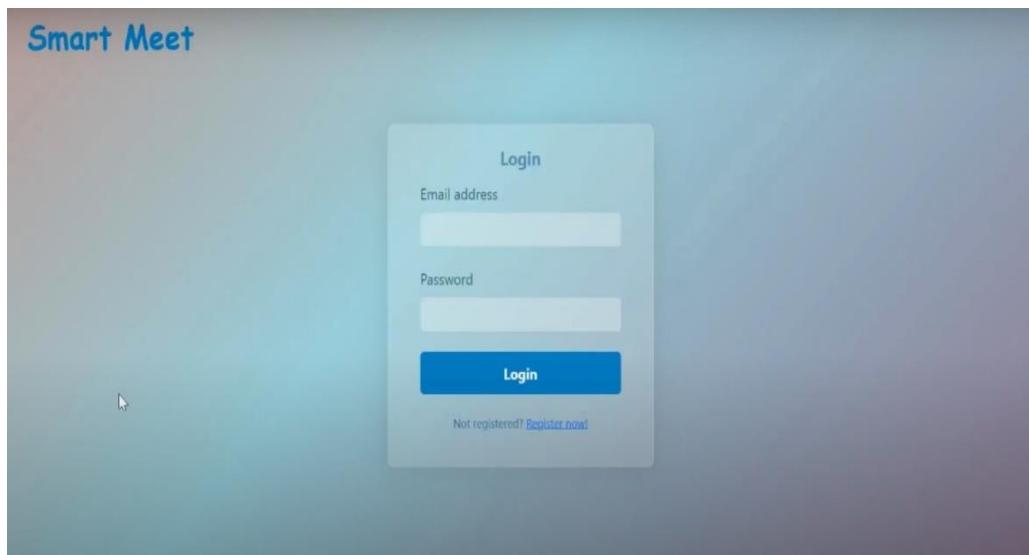

### Landing page :

### Registration page :

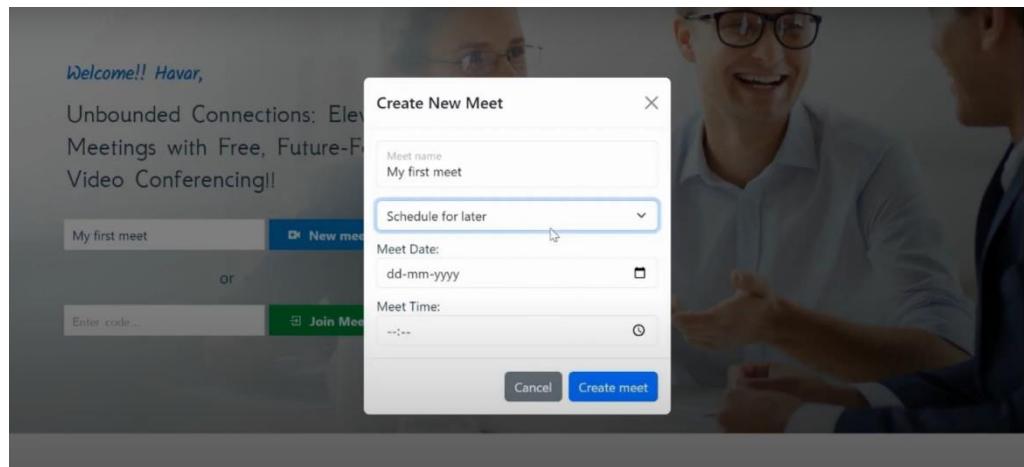

## **Login page :**

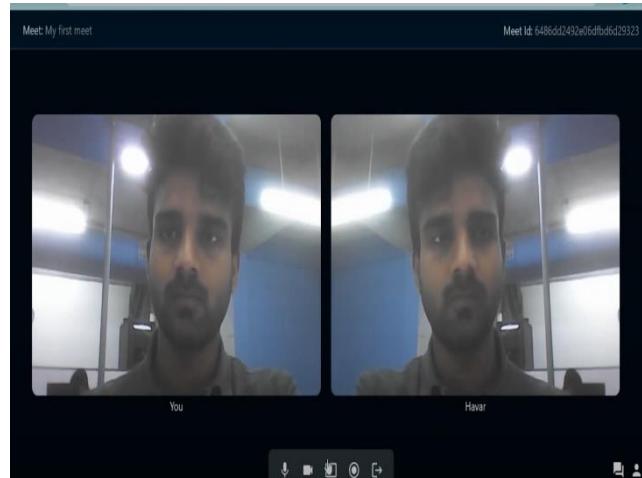

## **Home page :**

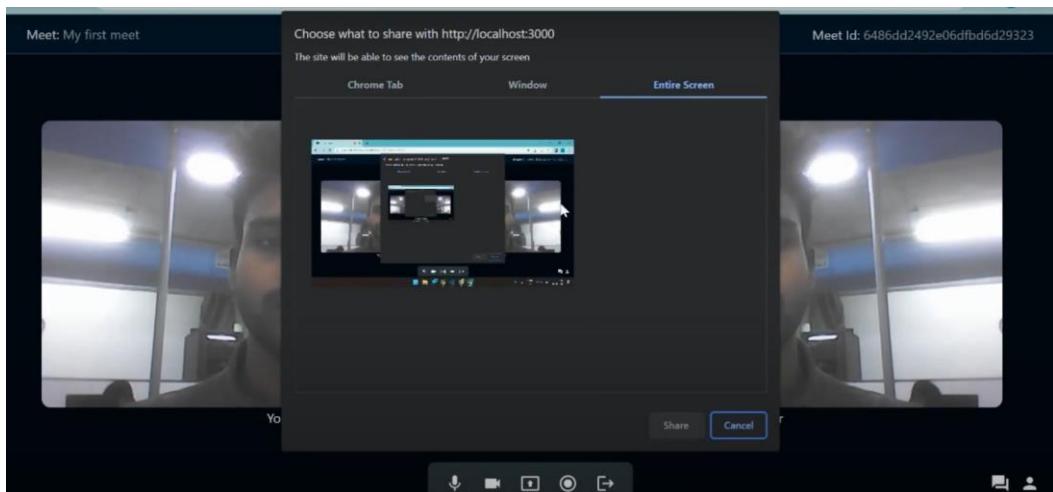

## Creating new meet :

## Meet page :

## Screen sharing :

## Profile page :

A screenshot of a user profile page titled "Smart Meet". On the left, there is a circular profile picture of a penguin. Below it, the text "Username: Havar" and "Email Id: havar@gmail.com". In the center, there are two tabs: "Upcomming meetings" and "Past meetings", with "Upcomming meetings" being the active tab. To the right of the tabs, there is a box containing meeting details: "Meet: My first meet", "Meet Id: 6486dd2492e06dfbd6d29323", "Timings: Date: 12/06/2023 Created Time: 14:23", and a small "Edit" icon. At the top right of the page, there is a dropdown menu with the name "Havar".

## 9. Testing

### Test objectives

- All field entries must work properly.**
- Pages must be activated from the identified link.**
- The entry screen, messages and responses must not be delayed.**

### Features to be tested

- Verify that the entries are of the correct format**
- No duplicate entries should be allowed**
- All links should take the user to the correct page.**

### Test cases :

#### User Module:

<b>Test Case ID</b>	<b>Test Scenario</b>	<b>Precondition</b>	<b>Test Steps</b>	<b>Expected Result</b>
<b>TC01</b>	<b>Register a new user</b>	<b>User is on the registration page</b>	<b>1. Enter valid user details (e.g., username, email, password). 2. Click on "Register" button.</b>	<b>User is successfully registered, and a confirmation message appears.</b>
<b>TC02</b>	<b>Register with existing email</b>	<b>User is on the registration page</b>	<b>1. Enter details with an existing email.</b>	<b>Registration fails with an error message stating that</b>

			<b>2. Click on "Register" button.</b>	<b>the email is already in use.</b>
<b>TC03</b>	<b>Login with valid credentials</b>	<b>User is on the login page</b>	<b>1. Enter correct email and password. 2. Click on "Login" button.</b>	<b>User is successfully logged in and redirected to the dashboard.</b>
<b>TC04</b>	<b>Login with invalid credentials</b>	<b>User is on the login page</b>	<b>1. Enter incorrect email or password. 2. Click on "Login" button.</b>	<b>Login fails with an error message indicating incorrect email or password.</b>
<b>TC05</b>	<b>Create a video conference link</b>	<b>User is logged in</b>	<b>1. Navigate to the "Create Conference" section. 2. Click on "Generate Link" button.</b>	<b>A unique conference link is generated and displayed to the user.</b>
<b>TC06</b>	<b>Join a video conference</b>	<b>User has a valid conference link</b>	<b>1. Click on the shared conference link. 2. Wait for the</b>	<b>User successfully joins the video conference, and audio/video</b>

			<b>conference to load.</b>	<b>streams are established.</b>
<b>TC07</b>	<b>Join a conference with an invalid link</b>	<b>User has an invalid conference link</b>	<p><b>1. Click on an invalid or expired conference link.</b></p> <p><b>2. Wait for the conference to load.</b></p>	<b>User receives an error message indicating that the link is invalid or expired.</b>
<b>TC08</b>	<b>View user profile</b>	<b>User is logged in</b>	<p><b>1. Navigate to the "Profile" section.</b></p>	<b>User profile details (e.g., name, email, etc.) are displayed.</b>
<b>TC09</b>	<b>Update profile information</b>	<b>User is logged in and on Profile page</b>	<p><b>1. Click on "Edit Profile".</b></p> <p><b>2. Modify profile details.</b></p> <p><b>3. Click on "Save" button.</b></p>	<b>Profile information is updated, and a success message is shown.</b>
<b>TC10</b>	<b>Logout from the application</b>	<b>User is logged in</b>	<p><b>1. Click on the "Logout" button.</b></p>	<b>User is logged out, and the session is terminated, redirecting to the login page.</b>

## 10.Screenshots or Demo

**Finally, after finishing coding the projects we run the whole project to test it's working process and look for bugs. Now, let's have a final look at the working of our video conference application.**

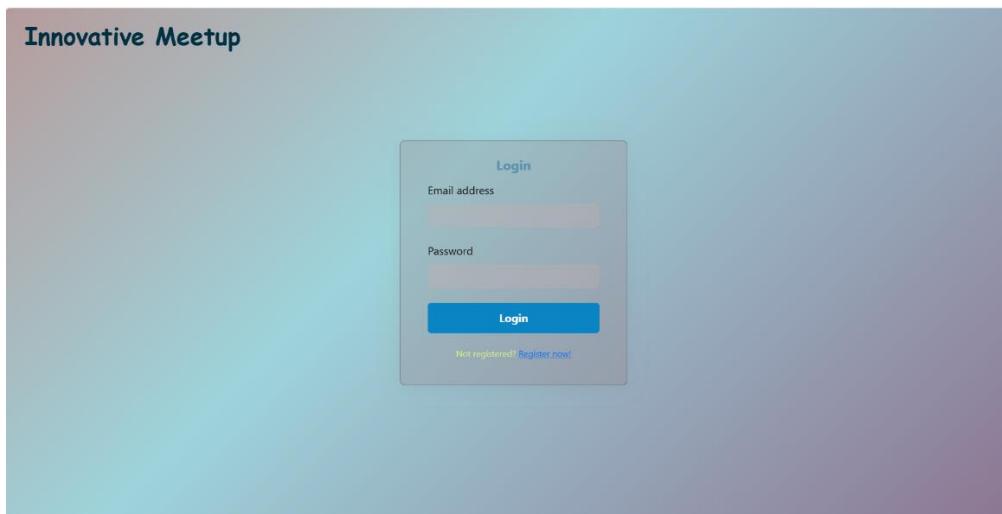

### Landing page :

### Registration :

A screenshot of the registration form from the Innovative Meetup website. The form is titled "Register" and contains three input fields: "Username", "Email address", and "Password". Each field has a corresponding text input box. Below the password field is a "Register" button. At the bottom of the form, there is a link "Already registered? [Login](#)". The background of the registration form is a light grey gradient.

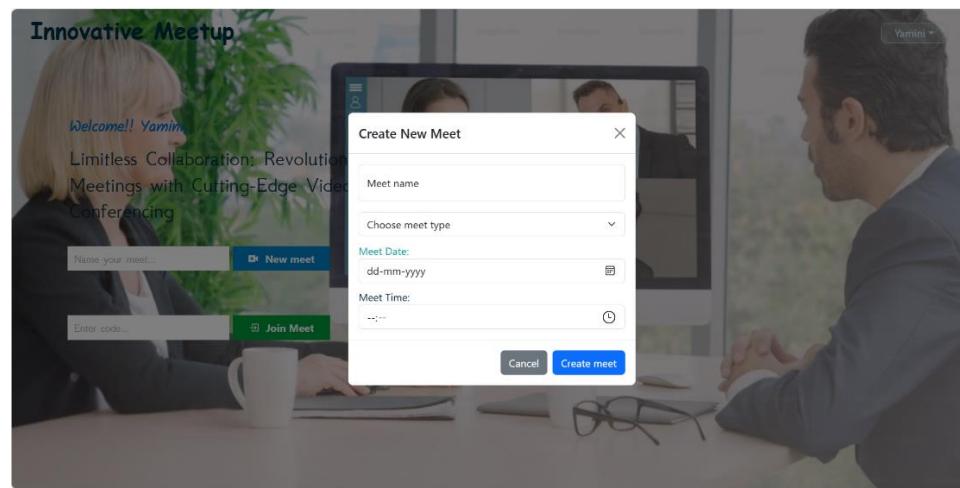

## **Login page :**

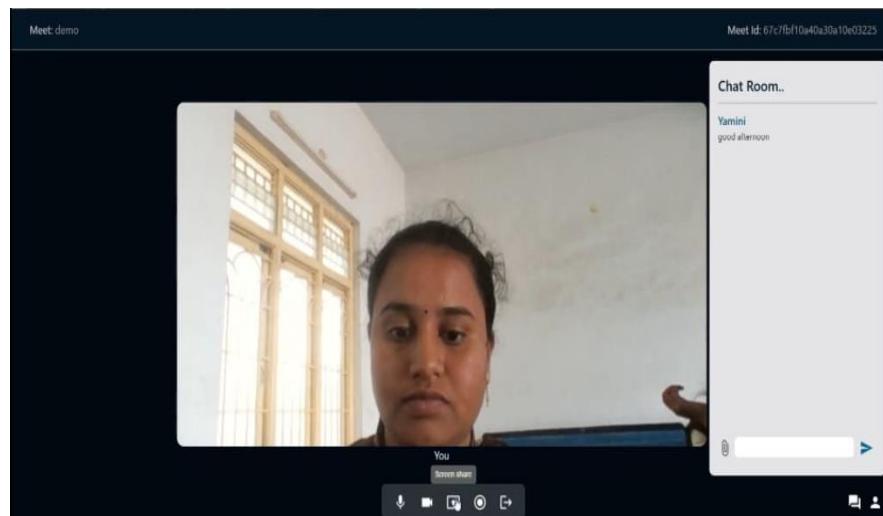

## **Home page :**

## Creating new meet :

## Meeting :

## Past Meetings :

The screenshot shows a web browser window for 'Innovative Meetup' at localhost:3000/profile. On the left, there's a sidebar with a penguin icon and user information: Username: Yamini and Email Id: 218xta04g8@khitguntur.ac.in. The main content area has tabs for 'Upcomming meetings' (highlighted in green) and 'Past meetings'. Below these tabs are three boxes, each representing a past meeting:

- Meet: Velithota Yamini | Meet Id: 67c818b238d62cccd21f75e9f  
Timings:  
Date: 05/03/2025 | Created Time: 14:56
- Meet: hello | Meet Id: 67c851496f7c8f065a50a901  
Timings:  
Date: 05/03/2025 | Created Time: 18:57
- Meet: yamini | Meet Id: 67c97265fd2bef44a3a3951c  
Timings:  
Date: 06/03/2025 | Created Time: 15:31

A dropdown menu in the top right corner shows 'Yamini'.

## Upcomming Meetings :

The screenshot shows a web browser window for 'Innovative Meetup' at localhost:3000/profile. On the left, there's a sidebar with a penguin icon and user information: Username: Yamini and Email Id: 218xta04g8@khitguntur.ac.in. The main content area has tabs for 'Upcomming meetings' (highlighted in green) and 'Past meetings'. Below these tabs is one box representing an upcomming meeting:

Meet: review | Meet Id: 67c96196a2d9d7ba8a4b7cdd  
Timings:  
Date: 09/03/2025 | Created Time: 15:00

Buttons for 'Join', 'Edit', and 'Delete' are visible to the right of the meeting details. A dropdown menu in the top right corner shows 'Yamini'.

## **12.Future Enhancement**

**As the demand for seamless communication continues to grow, several enhancements can be made to elevate the Video Conferencing App experience. First, integrating advanced features such as screen sharing and collaborative document editing would enhance real-time collaboration during conferences. Additionally, implementing end-to-end encryption would significantly improve security and privacy for users. Introducing an AI-powered background noise cancellation feature can further enhance audio quality, making conversations clearer and more professional. To cater to a wider audience, the app could be expanded to support multilingual interfaces and real-time translation services. Furthermore, incorporating scheduling capabilities for recurring meetings, along with automated reminders, would facilitate better time management for users. Finally, leveraging analytics to provide insights on user engagement and meeting effectiveness could help users optimize their conferencing experience.**
